

576 MK 2

Compact • Portable • Powerful

Product Overview

This update to the venerable 500 Series features improvements borrowed from the larger Pro-Series including Pinless, Long Life Solenoids. Plus Auto Tool Start is now Standard on all 500 Series. Powerful and compact, the 500 Series offers great performance and portability. Designed to capture dust generated by power tools and for jobsite clean up, it is ideal for work involving dust from concrete, drywall, wood, and any non-combustible dry material.

- Compliant with OSHA's Silica Dust Rule
- Single-Stage HEPA Certified Filtration System
- Optional Tri-Glide Dolly

Product Specifications

CFM.....	176	Weight.....	30 lbs
Sealed Lift.....	97"	Current.....	12.2A
HEPA.....	Single-Stage	Voltage.....	110V
Collection.....	8 Gal.		

Special Features

Self-Cleaning Technology:

The 576 dust vacuum is equipped with patented Automatic Pulse-Clean Technology™ that automatically cleans the filter while you work. Does not require extra equipment like air compressors or manual gadgets for filter cleaning.

Cyclonic Debris Management:

The Cyclonic Debris Management system comes standard on all vacuum tanks, extenders, and preseparators. Our CDM system works with our pulsing technology and prevents upwards of 90% of dust and debris from ever reaching the filter. The CDM system stops dust and debris from constantly cycling up to the filters and holds it at the bottom of the tank until discarded.

Durable Steel Construction:

Pulse-Bac® units are made for the rugged conditions of a job-site. With tanks made of 16ga. cold-rolled U.S. steel and a steel assembly covered with a high impact ABS plastic hood, Pulse-Bac® is made to keep working even in the most punishing conditions. Even details like wheels are heavy-duty, non-marking polyurethane casters, instead of molded plastic wheels on thin spindles.

HEPA Certified Filtration:

The 550H/1050H models provide Dual-Stage HEPA filtration. Dual-Stage filtration models, like all Pulse-Bac vacuums, feature the 5 Point HEPA Filter as an initial stage of filtration and an additional exhaust side HEPA filter. Both the 5 Point Filter and the exhaust side filter are individually tested to meet the 99.97% @ 0.3 microns standard required by most regulations and recommended when working with many materials. In fact, third-party testing of the 550H showed that our 2 stage filtration system actually provided 99.99% @ 0.3µm filtration, exceeding the standard.
