

ASCENT 311

Versatile • Expandable • Powerful

Product Overview

The new Ascent Expandable Bagger is Pulse-Bac's newest innovation that offers versatility and functionality. Loaded with the PRO-311 motor, this powerful machine offers the most airflow available in the PRO Series and provides unmatched dust collection for larger walk-behind grinders and mid-sized stationary tools. The expandable design makes it compact for transporting and delivers the convenience of a full-sized bagger. The Elevation Assist System makes lifting and lowering the bagger easy.

- Elevation Assist System
- CDM Plus Internal Separator
- Large non-marking 8-inch wheels

Product Specifications

CFM.....	311	Weight.....	160 lbs
Sealed Lift.....	70"	Current.....	15.5A/7.9A
HEPA.....	Single-Stage	Voltage.....	110V/220V
Collection.....	Ascent Bagger		

Special Features

Self-Cleaning Technology:

The ASCENT 311 dust vacuum is equipped with patented Automatic Pulse-Clean Technology™ that automatically cleans the filter while you work. Does not require extra equipment like air compressors or manual gadgets for filter cleaning.

Cyclonic Debris Management:

The Cyclonic Debris Management system comes standard on all vacuum tanks, extenders, and preseparators. Our CDM system works with our pulsing technology and prevents upwards of 90% of dust and debris from ever reaching the filter. The CDM system stops dust and debris from constantly cycling up to the filters and holds it at the bottom of the tank until discarded.

Durable Steel Construction:

Pulse-Bac® units are made for the rugged conditions of a job-site. With tanks made of 16ga. cold-rolled U.S. steel and a steel assembly covered with a high impact ABS plastic hood, Pulse-Bac® is made to keep working even in the most punishing conditions. Even details like wheels are heavy-duty, non-marking polyurethane casters, instead of molded plastic wheels on thin spindles.

HEPA Certified Filtration:

The ASCENT 311 model provides a Single-Stage HEPA filtration. Single-Stage filtration models, like all Pulse-Bac vacuums, feature the 5 Point HEPA Filter as an initial stage of filtration. The 5 Point Filters are individually tested to meet the 99.97% @ 0.3 microns standard required by most regulations and recommended when working with many materials.
