

PRO-311

Powerful • Versatile • Durable

Product Overview

The successor to our flagship 1250 model the PRO-311 is versatile and powerful and is ideal for many different applications. With 311 CFM & 70" of Lift, the PRO-311 can cover all the ground of the PRO-176 & PRO-225 but can also provide unmatched dust collection for larger walk-behind grinders, concrete saws, paver saws and mid-sized stationary tools like table saws. Choose from a **20 Gallon Tank, the Revolution 360 Bagger, or 55 Gallon Drum** to get a personalized cleanup experience.

- Compliant with OSHA's Silica Dust Rule
- Optional integrated Floor Sweep
- Versatile Collection Options

Pulse-Bac PRO-311

Industrial Dust Vacuum

Product Specifications

CFM.....	311	Weight.....	30 lbs
Sealed Lift.....	70"	Current.....	15.5A/7.9A
HEPA.....	Single-Stage	Voltage.....	110V/220V
Collection.....	20 Gal/Longopac/55 Gal		

Special Features

Self-Cleaning Technology:

The PRO-311 dust vacuum is equipped with patented Automatic Pulse-Clean Technology™ that automatically cleans the filter while you work. Does not require extra equipment like air compressors or manual gadgets for filter cleaning.

Cyclonic Debris Management:

The Cyclonic Debris Management system comes standard on all vacuum tanks, extenders, and preseparators. Our CDM system works with our pulsing technology and prevents upwards of 90% of dust and debris from ever reaching the filter. The CDM system stops dust and debris from constantly cycling up to the filters and holds it at the bottom of the tank until discarded.

Durable Steel Construction:

Pulse-Bac® units are made for the rugged conditions of a job-site. With tanks made of 16ga. cold-rolled U.S. steel and a steel assembly covered with a high impact ABS plastic hood, Pulse-Bac® is made to keep working even in the most punishing conditions. Even details like wheels are heavy-duty, non-marking polyurethane casters, instead of molded plastic wheels on thin spindles.

HEPA Certified Filtration:

The PRO-311 model provides a Single-Stage HEPA filtration. Single-Stage filtration models, like all Pulse-Bac vacuums, feature the 5 Point HEPA Filter as an initial stage of filtration. The 5 Point Filters are individually tested to meet the 99.97% @ 0.3 microns standard required by most regulations and recommended when working with many materials.
